

PRE-CUT

Cross or longitudinal pre-cut on moving web

MOD. SM-CTP

cross tear perforation unit for web direction tear lines in in film, foil, foam, paper and non-woven. The back-up pressure roller can be in natural fibre (brush) or rubber according to the material to be processed. Our Mod. SM-CTP can be equipped with blades or pins mounted on a shaft depending on customers' requirements and materials. The encoder with a measuring wheel synchronizes the speed with the hosting machine and manage the distance of the cross-tear lines and there is also an epicyclical adaptor for motion transmission to the roller.

The minimum or maximum distance of each cross-tear web direction lines is as per customer request.

Features

Max material width 3000mm

Max speed 200 meters per minute

Installation on bag making machine, extruder, slitter, printing machine and so on

Encoder to synchronize the speed Yes

Material that could be processed PE, PP, paper, foam non-woven, coated material and so on

Operator language Yes

remote assistance Yes

Touch screen Yes with predisposition 4.0
